

STRENGTHENING INDIA'S ELV ECOSYSTEM WITH AUTHORISED RVSF PARTNERS

As India accelerates the implementation of its Vehicle Scrappage Policy and advances its circular economy ambitions, Registered Vehicle Scrapping Facilities (RVSFs) are emerging as critical enablers of a transparent, compliant, and efficient End-of-Life Vehicle ecosystem. However, scaling operations, ensuring regulatory compliance, and maintaining end-to-end traceability require robust systems, strong partnerships, and continuous alignment with evolving government and OEM standards. Re Carma partners with RVSFs to design and operationalise structured, compliant, and digitally enabled ELV processes, integrating advanced systems, standardised practices, and seamless traceability across operations.

Through this collaboration, authorised facilities can enhance operational efficiency, strengthen compliance frameworks, and build greater credibility within the ecosystem.

By enabling RVSFs to integrate seamlessly into a scalable and high-integrity nationwide network, Re Carma is not only supporting operational excellence but also positioning its partners at the forefront of India's transition towards a more circular, sustainable, and future-ready mobility ecosystem.

Why Partner with Re Carma

Access to OEM-Aligned Ecosystems

Integration into structured ELV programs driven by leading automotive manufacturers

Regulatory and EPR Alignment

Support in meeting evolving compliance requirements and documentation standards

Digital Traceability Systems

End-to-end tracking of vehicle dismantling and material recovery

Operational Standardisation

Implementation of best practices in depollution, dismantling, and reporting

Our Approach for RVSFs

Operational Excellence

We support our partners in running their operations efficiently by deploying best practices based on Lean Six-Sigma principles

Cost Optimization

Our support in sourcing ELVs helps RVSFs optimize their efforts. Our vertical integration helps RVSFs sell recyclables at the right price with minimal effort.

Ecosystem Integration

Onboarding into structured ELV networks aligned with OEM and regulatory expectations

Process Optimisation

Standardised workflows for depollution, dismantling, and material handling

Compliance and Documentation Support

Audit-ready systems aligned with regulatory and EPR frameworks

Market Linkages

Access to verified recyclers and downstream material recovery channels

What Sets Re Carma Apart

Integrated Sustainability Expertise

Backed by Re Sustainability's leadership in environmental and waste management

Pan-India Network Enablement

Connecting RVSFs into a scalable, nationwide ELV ecosystem

Technology-Driven Transparency

Digital systems ensuring traceability, reporting accuracy, and compliance

Circular Economy Integration

Maximising resource recovery and value realisation from ELVs

Re Carma enables RVSFs to scale with confidence, operate with transparency, and align with the future of mobility

Partner with

to strengthen your role in
India's formal ELV ecosystem
